The CYBEL PHOENIX-2040 is a benchtop fiber laser that can operate either in a CW or ns pulsed mode. This narrow linewidth (<50kHz) laser can deliver a 1W average power, 10W peak power, and 0.5 μJ energy for 50ns pulses and 2MHz frequency rep. rate. It is available in either one or two to interleave channel wavelengths (e.g. 2039 & 2040nm). The repetition rate can be adjusted between 100kHz to 4MHz while the pulse width can be set between 20ns to 1μs. Other wavelengths in the 2 microns are available.

The PHOENIX-2040 laser comes in a 19" 2U rack mount benchtop unit with either a standard or an all polarization maintaining (PM) fiber. Benchtop control is done from the front panel or via a USB port.
