DR-AN-40-MO

40 GHz Analog Medium Output Voltage Driver

The DR-AN-40-MO is a wideband RF non-inverting amplifier module designed for analog applications at frequencies up to 40 GHz.

The DR-AN-40-MO is characterized by a low Noise Figure and a linear transfer function whose 1 dB compression point is above 17 dBm. It exhibits flat Group Delay and Gain curves with reduced ripple over the entire bandwidth.

The DR-AN-40-MO operates from a single power supply for safety and ease of use, and offers gain control over 3 dB. It comes in a compact housing with V type RF connectors and with an optional heat-sink.

Features

- Output voltage up to 6 V_{nn}
- · Linear amplifier
- Flat gain up to 30 GHz
- · Single voltage power supply
- · Low group delay variation

Applications

- LiNbO₃ & InP modulators
- · OFDM, RoF, phase modulation
- · Research & Development

Options

- Heat-sink
- · Low output voltage version for EAM

Related Equipments

- MX-LN-40, MXAN-LN-40 modulators
- MBC-AN Automatic Bias Controllers

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.
