DR-PL-20-MO

Pulse Medium Output voltage Driver Module

The DR-PL-20-MO RF drivers are amplifiers module designed to drive LiNbO₃ optical modulators so as to generate undistorted optical pulses.

Electrical pulsed signals differ from classical telecom signals by long periods with no signal, when telecom signals are usually well balanced in 1 and 0. They also differ from analog signal by a wider frequency content. In order to generate clean optical pulses with sharp edges, sustained high and low levels and no overshoot, pulsed signals do require specific amplifiers.

The DR-PL-20-MO driver is optimized for low and high Pulse Repetition Frequency (PRF) signals from 10 Hz to 1 GHz. The bandwidth up to 20 GHz accommodates 50 ps narrow pulse width with short rise and fall time (down to 30 ps) and can withstand longer pulses up to 10 ns.

The DR-PL-20-MO drivers come in compact connectorized modules that match directly with Exail modulators, they use a single voltage power supply for ease and safety of use and feature an output voltage control for maximum flexibility. An optional heat-sink is proposed as an accessory.

Features

- Specific design for pulse signals
- Accomodate a variety of pulse formats
- High pulse fidelity

Applications

- Pulse generation
- Pulse picking
- Spectroscopy
- Lidar

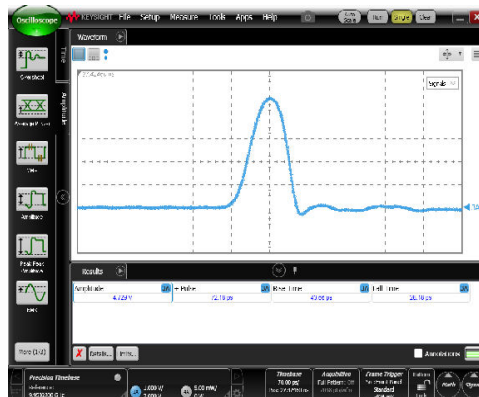

Options

- Heat-sink

Performance Highlights

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.

Pulses measurements

The input electrical signal is generated by Anritsu MP1800A. Input and output signals measured using Keysight 86100D.

Low frequency repetition rate with a short pulse width of PW = 60 ps

Input signal: Pulse amplitude = 0.22 V_{pp}, Rise time = 24 ps

Output response: Pulse amplitude = 4.7 V_{pp}, Rise time = 32 ps

Low frequency repetition rate with a short pulse width of PW = 1 ns

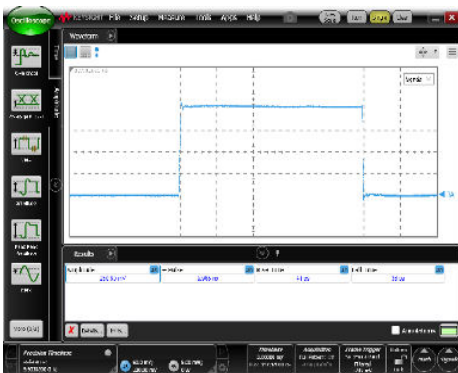

Input signal: Pulse amplitude = 0.25 V_{pp}, Rise time = 32 ps

Output response: Pulse amplitude = 5 V_{pp}, Rise time = 32 ps

Low frequency repetition rate with a short pulse width of PW = 10 ns

Input signal: Pulse amplitude = 0.25 V_{pp}, Rise time = 32 ps

Output response: Pulse amplitude = 4.8 V_{pp}, Rise time = 32 ps

The heat-sinking of the module is necessary. It's user responsibility to use an adequate heat-sink. Refer to page 6 for Exail recommended heat-sink.

PIN	Function	Operational Note
IN	RF In	Female K connector
OUT	RF Out	Male K connector
V_{bias}	Power supply voltage	Set a typical operating specification
V_{amp}	Output voltage amplitude adjustment	Adjust for gain control tuning
V_{xp}	Output pulse adjustment	Adjust for pulse adjustment (amplitude and width) tuning
